

McKesson is the largest and oldest healthcare company in North America. One of their multi-specialty offerings is providing inventory management solutions to healthcare facilities. They developed proprietary software to do so and chose to partner with Talon to provide the hardware that ultimately delivers the best solution possible.

A The Challenge

McKesson wanted to partner with an industry-leading medication management hardware supplier capable of handling custom medical cabinet requests from facilities requiring secure inventory management for their pharmaceuticals.

This partner needed to align with McKesson's reputation for quality, focus on innovation, and dedication to customer service through unwavering integrity.

Talon and its team of hard-working problem solvers fit the bill.

B The Solution

Over the past ten years, Talon (formerly S&S Technology), has manufactured more than 1,000 MedCab™ products from the Automated Dispensing Cabinet product line that pairs with McKesson software to ultimately provide truly impactful solutions to their clients.

The solution is designed to align with hospital's workflow and operational model, and addresses the critical issue of drug diversion.

Talon medical cabinets are scalable, user-friendly, built-to-last, and engineered with the customer in mind.

The Result

C "The amount of options that Talon offers regarding customization have truly allowed us to address the needs of our clients fully. Furthermore, it has made it possible for us to expand our business into new markets as a result of the dependability of their products," says Wayne George, Sr. Lynx Technology Specialist for McKesson.
